DETAILED ACTION

Response to Arguments

1. Applicant's arguments, see p.12, filed 11/03/08, with respect to claim objection of claims 67-72 have been fully considered and are persuasive. The objection of the claims has been withdrawn. The examiner notes that the medium of the computer readable medium is hardware, the hardware disclosed in the specification is a data storage device, such as zip drive, floppy disc drive, hard drive, CD-ROM drive and tape drive.

Claim Rejections - 35 USC § 101

35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

2. Claims 1-18 and 55-60 are rejected under 35 U.S.C. 101 as not falling within one of the four statutory categories of invention.

Supreme Court precedent¹ and recent Federal Circuit decisions² indicate that a statutory "process" under 35 U.S.C. 101 must (1) be tied to another statutory category (such as a particular apparatus), or (2) transform underlying subject matter (such as an article or material) to a different state or thing. While the instant claim(s) recite a series of steps or acts to be performed, the claim(s) neither transform

underlying subject matter nor positively tie to another statutory category that accomplishes the claimed method steps, and therefore do not qualify as a statutory process.

Regarding claim 1, first of all, the generating steps do not fall under “transform underlying subject matter to a different state or thing”, since the signal involved in the steps above do not perform physical transformation. Secondly, for example, the generating steps of sufficient breadth that it would be reasonably interpreted as a series of steps completely performed mentally, verbally or without a machine. The method steps recited do not involve any hardware since it would be reasonably interpreted as a human brain. The generating of data sequence..., generating a chip sequence could be interpreted as writing numbers on a piece of paper, generating $co(t)$ could be interpreted as solving for an equation and providing the result and further computing for another data representing estimated communication channel impulse response. The further limitations in claims 2-18 do not cure the deficiency above, thus are directed to non-statutory subject matter.

Regarding claims 55-60, the claims are directed to non-statutory subject matter as applied above.

Allowable Subject Matter

3. Claims 19-54 and 61-72 are allowed.
